**People don't want
a drill, they want
a hole in the wall.**

THEODORE LEVITT

JTBD PREDICTS ADOPTION

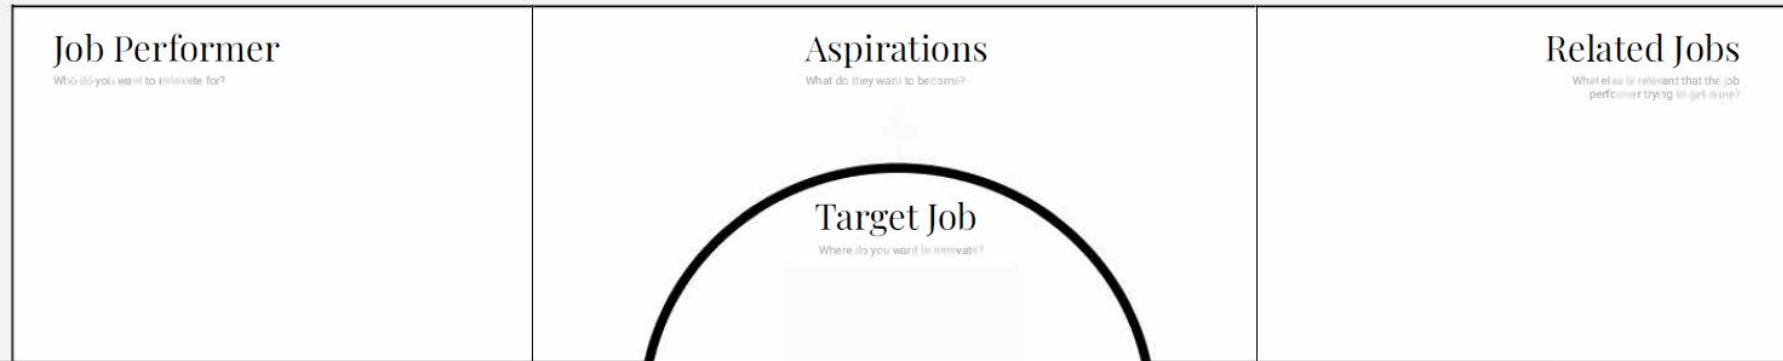

People “hire” services that get a job done better.

WHAT'S THE JTBD?

AI ACCELERATES JTBD

1. JTBD is solution agnostic
2. JTBD uses structured language and rules

Job Steps

What is the process of getting the job done?

BEGINNING

Plan
Define,
Select,
Determine...

Locate,
Gather,
Access,
Retrieve...

Prepare,
Set up,
Organize,
Examine...

Confirm,
Validate,
Prioritize,
Decide...

MIDDLE

Execute,
Perform,
Transact,
Administer

Monitor,
Verify,
Track,
Check

Modify,
Update,
Adjust,
Maintain

END

Consolidate,
Synthesize,
Conclude,
Close

Follow-up,
Share,
Archive,
Integrate

Emotional & Social Aspects

How does the job performer feel while living the job?
How do they want to be perceived while doing the job?

Outcomes

How does the job performer measure success of getting the job done?

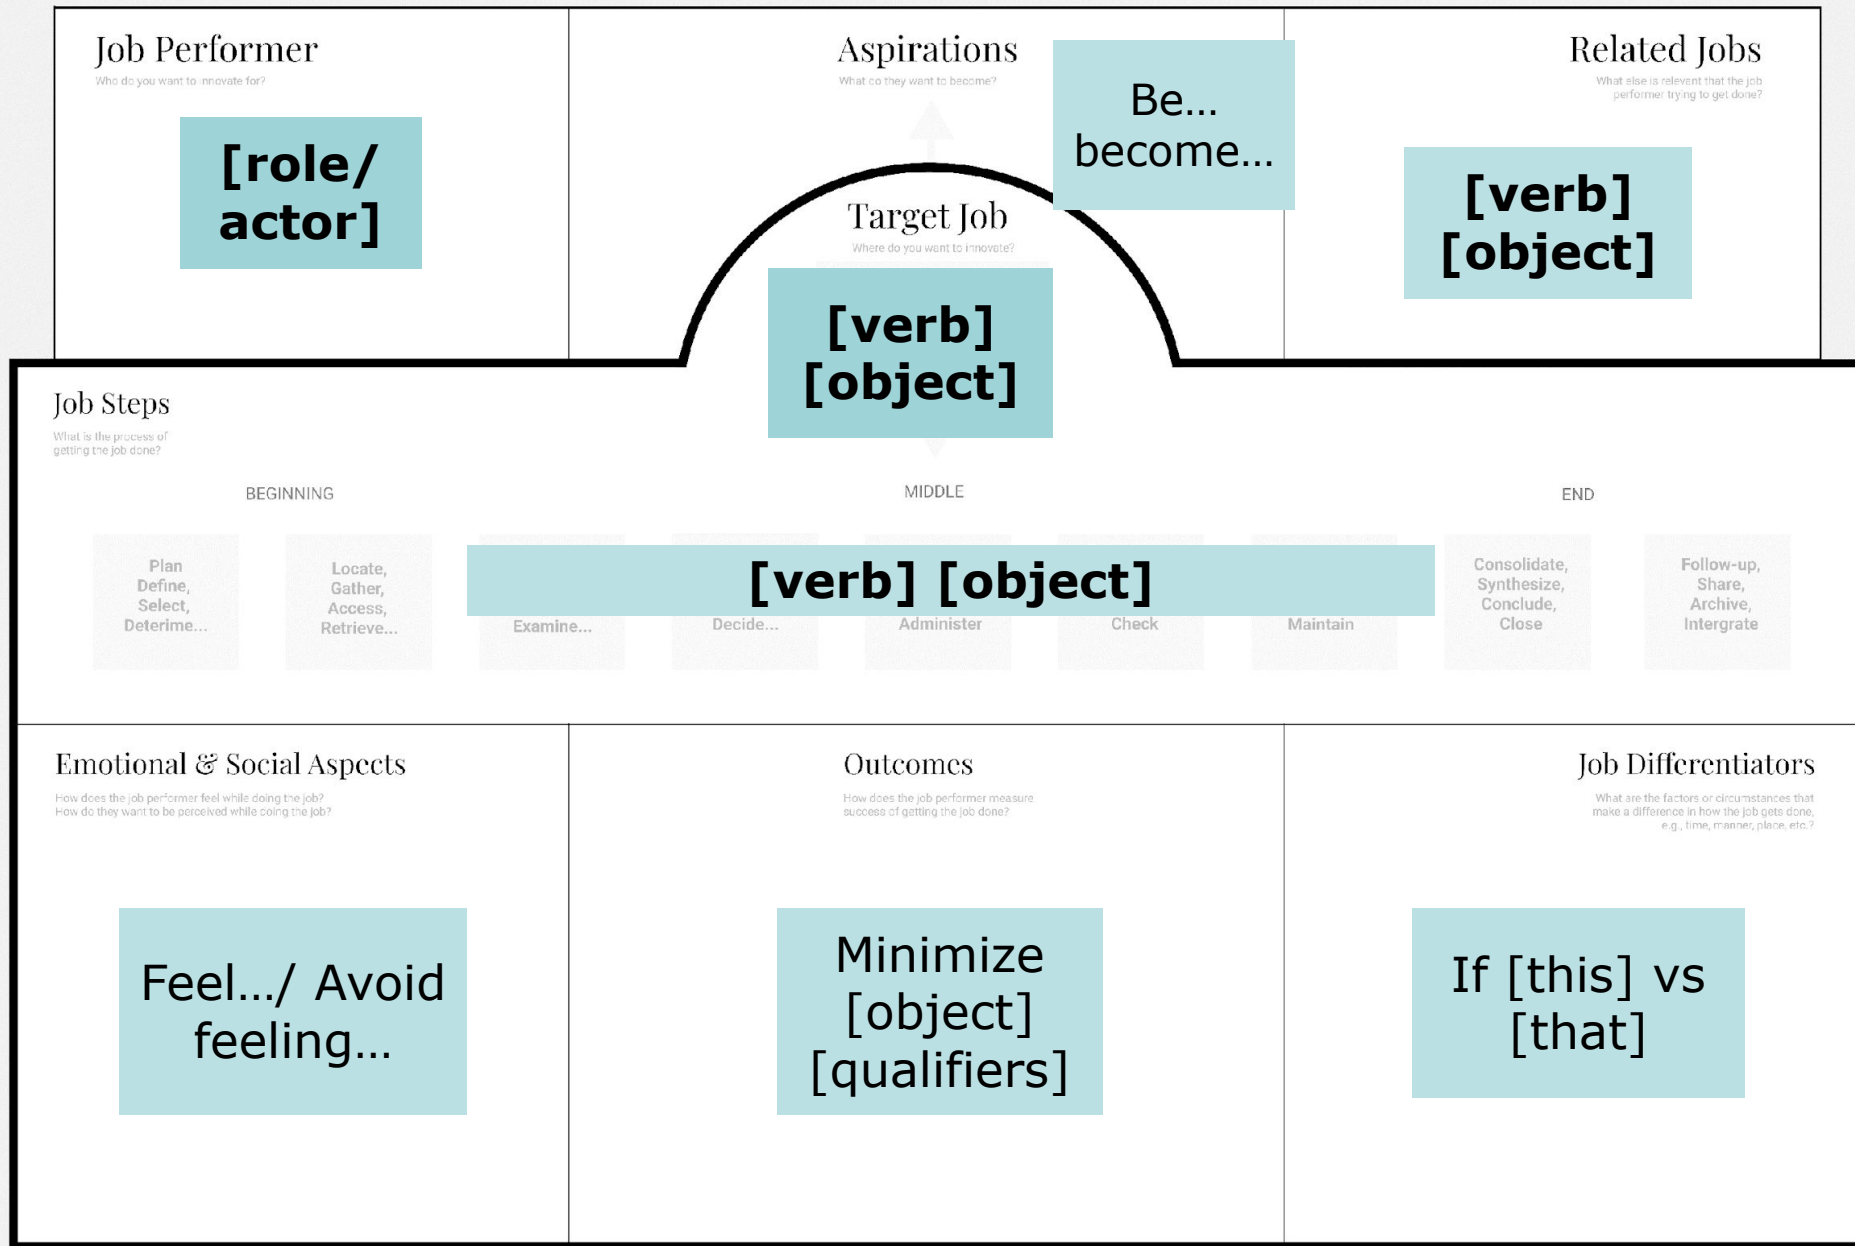

Job Differentiators

What are the factors or circumstances that make a difference in how the job gets done, e.g. time, manner, place, etc.?

JTBD CANVAS 2.0

What field or domain are you in?

1. SCOPE

Frame

Who are job performers are in my field?

I'm working with the jobs to be done (JTBD) framework and would like to find job performers in the field of [[field]].

Definition

The job performers are the key actors or roles that have objectives to accomplish within that field.

Example

For instance, in the field of buying and selling homes, job performers would include, but are not limited to: home buyers, home sellers, real estate agents, lawyers, inspectors, loan officers, mortgage lenders, titling agents, and neighbors.

Format

Please list [[n]] job performers in bold followed by a one sentence description of their role in that field. Each job performer should be singular in nature, with no ANDs.

Job Differentiators

What are the factors or circumstances that make a difference in how the job gets done, e.g., time, manner, place, etc.?

1. SCOPE

Frame

What jobs are people trying to get done in my field?

I'm working with the jobs to be done (JTBD) framework and would like to find the top jobs that [[job performers]] are trying to get done in the field of [[field]].

Definition

A “job” is an objective that the job performer strive to achieve in that field.

Example

For instance, in the field of buying and selling homes, job would include, but are not limited to: shop for a new home, bid on a new home, close on a new home, move homes, sell old home, renovate new home, and settle into new home.

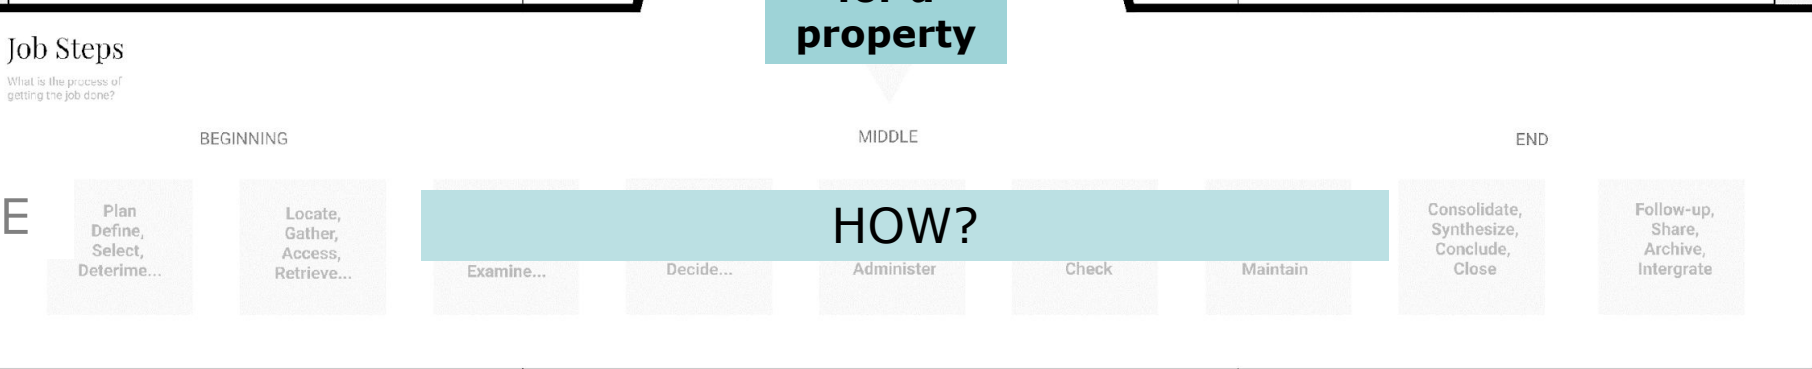

Format

Please list [[n]] jobs in bold followed by a one sentence description of that job in that field. Each job should begin with a first person verb and be singular in nature, with no ANDs.

Instructions and details: jtbd.tk/canvas

2. INVESTIGATE

2. INVESTIGATE

Frame

How do job performers get the job done?

I'm working with the jobs to be done (JTBD) framework and would like to create a job map for [[job performers]] trying to get [[target job]] done.

Definition

A “job map” is a chronological sequence of steps. The steps are the sub-objectives that are required in order to complete the job.

Example

For instance, in the field of buying and selling homes, the job map for a home buyer trying to shop for a new home might look like this: determine new home criteria, identify source to shop, learn about the market, seek available homes, compare available homes, select a home, place a bid.

Format

Please list 12 job steps in bold followed by a one-sentence description of that job step in that field. Each job step should begin with a first-person verb and be singular in nature, with no ANDs.

3. CREATE A JOB MAP

The screenshot shows the Cookup.ai website interface. At the top left is the logo 'Cookup.ai'. At the top right are navigation links: 'Apps', 'Categories', 'Collections', 'ChatGPT' with a dropdown arrow, and 'Create App'. The main content area features a title 'JTBD: Job Map Creator | by Cali' and a URL 'https://bit.ly/cali-linkedin'. To the right of the title is a green button labeled 'Generate another'. Below the title, the 'Input' is 'treat the flu' and the 'Result' is a structured job map. The job map includes a title 'PROJECT JOB | JOB OF ACTION (within executor's control)', a separator line, and two sections: 'PREPARE AND PLAN:' and 'EXECUTION:'. Each section contains a list of tasks.

JTBD: Job Map Creator | by Cali - <https://bit.ly/cali-linkedin>

Generate another

Input: treat the flu

Result:

PROJECT JOB | JOB OF ACTION (within executor's control)

PREPARE AND PLAN:

- Identify the symptoms and severity of the flu.
- Determine the appropriate treatment plan.
- Consult with a healthcare professional.
- Get a prescription for medication, if necessary.
- Purchase necessary medication and supplies.
- Ensure availability of fluids, nutrition, and rest.

EXECUTION:

- Take medication as directed.
- Alleviate symptoms and reduce fever.
- Rest and hydrate frequently.
- Allow the body to recover and maintain hydration.
- Monitor symptoms and progress.
- Adjust treatment plan as necessary.

👍 🗨️ 📄 🐦 Share

4. PRIORITIZE OUTCOMES

4. PRIORITIZE OUTCOMES

Minimize the chance of exceeding budget

How important is this to you? 1 2 3 4 5 6 7 8 9 10

How easy can you get this done? 1 2 3 4 5 6 7 8 9 10

Minimize the time it takes to identify options

How important is this to you? 1 2 3 4 5 6 7 8 9 10

How easy can you get this done? 1 2 3 4 5 6 7 8 9 10

Minimize lack of knowledge about specific neighborhoods

How important is this to you? 1 2 3 4 5 6 7 8 9 10

How easy can you get this done? 1 2 3 4 5 6 7 8 9 10

5. SYNTHESIZE: JOB STORIES

When I'm **comparing available homes** and am **unfamiliar with neighborhoods** of a potential home to buy but value having a strong community feel to my living arrangement,

I want to be able to get an immediate sense of what it might be like to live in a specific area,

So I can **reduce any lack of knowledge of the neighborhood** and what it might feel like to live there, giving me **confidence** about integrating that information into my decision-making process.

JTBD + AI

Let robots do the boring part of customer research

You do the interviews. AI does the prep and analysis.

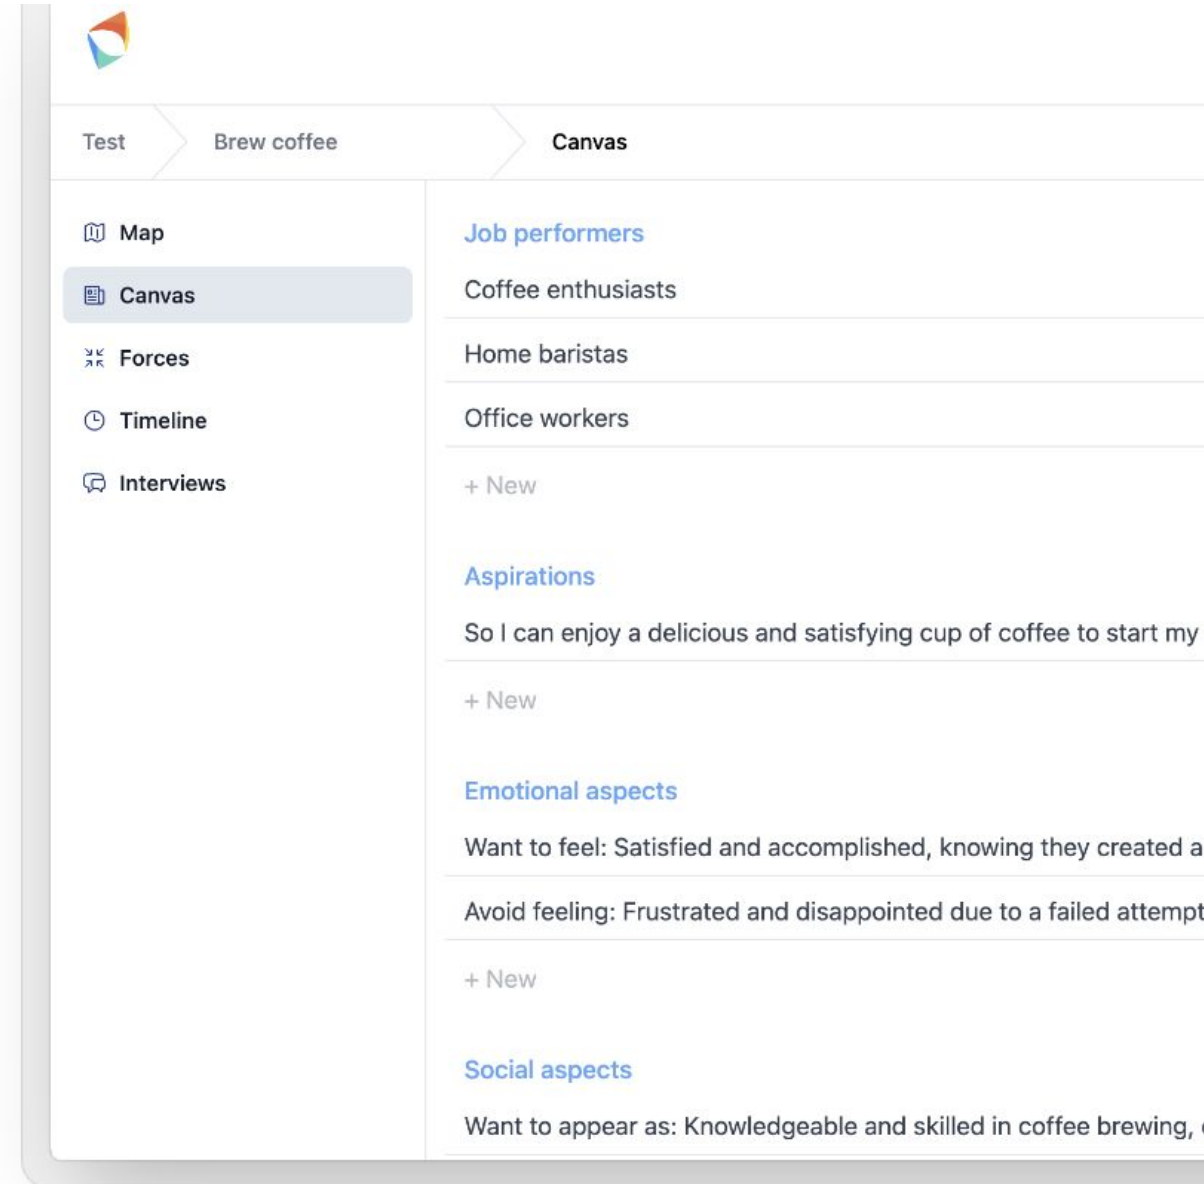

- Get up-to-speed on new markets in hours instead of days.
- Analyze your interview transcripts with the click of a button.
- Generate deliverables in a fraction of the time.

Skip the learning curve and go into your first interview as if it were the fifth.

JTBD + AI

AI...

- Doesn't replace real-world input and validation
- Sometime you get 80+% of the way there
- AI finds things you might not, quicker
- Makes you a more informed researcher
- Accelerates and scales research

FLIPPED RESEARCH?

Once upon a time...

...a shoe company sent two salespeople to different regions in Africa to determine the market potential there. Both completed a survey of the market and called back to the main office.

One reported:

“No one here wears shoes, there is no market for us.”

The other reported:

“No one here wears shoes, there is a huge market for us!”

THANK YOU

Foundations of Jobs to Be Done The Core Framework

www.jtbdt toolkit.com

PROMPT

Do a Job Canvas for the JTBD of “treat the flu” with the following:

1. **Job performers / job executors**
2. **Target Job to Be Done** (phrase as “Help me to...”)
3. **Related Jobs:** What else is the job performer trying to get done within the domain? The related jobs should be distinct from the target job. Label each related job as a Must-Have Job, Nice-to-Have Job, or Aspirational Job, based on the Job Spectrum concept in Bob Moesta’s book, “Learning to Build.”
4. **Context / Symptoms:** What are the changes in someone’s life that cause the person to finally say it’s time to take action? Some change had to happen. Phrase as “when I...”
5. **Aspirations:** What does the job performer aspire to become by doing the job? (phrase output of this analysis starting with “So I can...”)
6. **Job Steps:** What are the stages of the process for how the job performer gets the job done? The job steps describe the process of getting a job done. They form a chronological sequence that will eventually become a job map. Job steps always begin with an action verb in the first person. List functional job steps (i.e., the process of making progress with the JTBD) separately from consumption job steps (i.e., the purchase journey). For functional jobs steps, group the steps according to 1) “determine” (or plan, select, define...), 2) “locate” (or gather, access, retrieve...), 3) “prepare” (or set up, organize, examine...), 4) “decide” (or validate, prioritize, confirm...), 5) “execute” (or perform, transact, administer...), 6) “monitor” (or verify, track, check...), 7) “modify” (or update, adjust, maintain...), 8) “conclude” (or store, finish, close, follow-up, share, archive, integrate). Please list as many steps as you can think of (not just one per verb).
7. **Emotional and Social Aspects:** How does the job performer want to feel / not feel while doing the job? How do they want to be perceived / not to be perceived while doing the job? There might be several dozen emotional and social aspects for any target job. Emotional aspects begin with “want to feel” or “avoid feeling.” Social aspects begin “appear as” or “avoid appearing as.”
8. **Consumer Outcomes:** How does the job performer measure the success of getting the job done? Outcome statements have a regular format: A verb that shows a direction of change, e.g., minimize, reduce, decrease; Unit of measure, very often time, effort, or likelihood; Qualifiers make the outcome statement specific and relevant to the target job. There might be up to 50 outcomes statements.
9. **Shared Ecosystem Value:** How would other stakeholders in the ecosystem at a population level quantify success of the job executor doing the job?
10. **Hiring and Firing Criteria:** What do we hear when hiring? When firing? Group these customer quotes according to hiring and firing criteria.
11. **Job Differentiators:** What are the factors or circumstances that make a difference in how the jobs gets done? There will be factors that differentiate executing the job. These are often time, manner, and place, but other characteristics could become job differentiators as well such as other health conditions (list the relevant conditions for these jobs) and personal preferences (list which factors). To be consistent, begin each with “If” and show the range of options with a “vs.,” if appropriate. (e.g., If the job performer is single vs. married), and indicate how the recommendation would be different.

JTBD CANVAS – TREAT THE FLU

<p>Job Performer: Individuals who have contracted the flu</p>	<p>Context (When I am...):</p> <ul style="list-style-type: none"> • Sick at work, I feel miserable and cannot focus on my tasks • Caring for children while sick, it's hard to keep up with their needs and my own. • A sick student, it's hard to keep up with my studies and attend classes." • An athlete and sick, it's hard to train/perform at my best." • Older and I have the flu, it takes me longer to recover and I worry about complications." 	<p>Aspirations (So I can...):</p> <ul style="list-style-type: none"> • Get back to my normal routine and feel like myself again. • Go to work or school and be productive. • Take care of my kids or other responsibilities. • Enjoy my hobbies or activities again. • Feel more comfortable and not be in so much pain or discomfort. 	<p>Related Jobs:</p> <ul style="list-style-type: none"> • Prevent the flu • Manage underlying causes of the flu • Address severe complications of the flu requiring more intensive care • Address underlying health conditions exacerbated by the flu
